Capabilities Deck

AI-first software development for businesses ready to lead. A comprehensive overview of our services, expertise, and track record.

2025 Edition | pikessoft.com | hello@pikessoft.com

About Pikessoft

Founded in 2015, Pikessoft is an AI-first software development company headquartered in Lahore, Pakistan, with distributed teams serving clients worldwide. We specialize in building intelligent, production-grade software that combines cutting-edge AI with battle-tested engineering practices.

Our 60+ person team includes AI/ML engineers, full-stack developers, cloud architects, mobile specialists, data scientists, and UX designers. We operate as embedded product teams, not outsourced labor, partnering closely with founders, CTOs, and product leaders to ship software that moves the needle.

9+ Years of Growth

500+ Projects Delivered

10+ Industries Served

90% Client Retention

Our Mission

To democratize access to world-class AI engineering. We believe every ambitious business deserves a technical partner that can turn AI from a buzzword into a competitive advantage, building systems that think, adapt, and scale alongside their business.

Core Services

1. AI & Generative AI

Custom AI agents, LLM-powered workflows, predictive analytics, computer vision, NLP pipelines, and RAG knowledge systems. We build AI that automates decisions and creates compounding value.

Technologies: OpenAI, Anthropic, LangChain, TensorFlow, Pinecone, Hugging Face

2. Mobile Development

Cross-platform and native mobile applications with AI-powered features. From on-device ML to real-time sync and biometric auth.

Technologies: React Native, Flutter, Swift, Kotlin, Firebase

3. Web Development

Full-stack web platforms from SaaS dashboards to e-commerce engines. Headless CMS, real-time features, and performance-first architecture.

Technologies: Next.js, React, Node.js, PostgreSQL, Redis, GraphQL

4. Cloud & DevOps

Cloud-native infrastructure, CI/CD pipelines, container orchestration, and cost optimization. We make deployments boring and reliable.

Technologies: AWS, GCP, Azure, Kubernetes, Terraform, Docker

5. Data Science & Analytics

ML model development, data pipeline engineering, business intelligence dashboards, and predictive systems that turn raw data into strategic advantage.

Technologies: Python, Apache Spark, Snowflake, Tableau, dbt

6. UI/UX Design

Research-driven design with user testing, design systems, accessibility compliance, and AI-informed optimization.

Technologies: Figma, Adobe XD, Framer, Miro, Maze, Hotjar

Engagement Models

Dedicated Team
A fully embedded engineering team that operates as an extension of your organization. Ideal for long-term product development.

Project-Based
End-to-end delivery with fixed scope, timeline, and budget. Ideal for MVPs, proof-of-concepts, and well-defined builds.

Staff Augmentation
Individual specialists who plug directly into your existing workflows. Scale up or down as needs evolve.

AI Consulting
Strategic advisory on AI adoption, architecture reviews, and implementation roadmaps from senior AI engineers.

Industries We Serve

FinTech & Banking
Fraud detection, risk scoring, algorithmic trading

Healthcare
Medical imaging AI, patient portals, EHR integration

E-Commerce
Recommendation engines, dynamic pricing, visual search

SaaS & Startups
MVP development, AI feature integration, scale engineering

Real Estate
PropTech platforms, valuation models, virtual tours

Education
Adaptive learning, AI tutoring, LMS platforms

Selected Projects

Over 500 projects delivered across fintech, healthcare, e-commerce, real estate, and education. From AI-powered recommendation engines to full-stack SaaS platforms, we bring technical depth to every engagement.

GigMi
FinTech | Micro-Investment Platform

A fractional investment platform enabling users to invest in real estate, stocks, and commodities with as little as $1. Built with React Native, Node.js, and integrated payment processing.

Keyki
E-Commerce | AI-Powered Marketplace

An AI-enhanced marketplace that uses computer vision for product categorization and natural language processing for intelligent search and recommendation.

Neurolytics
Healthcare | Clinical Decision Support

An AI-powered clinical decision support system that assists neurologists with EEG analysis, reducing diagnostic time by 40% through automated pattern recognition.

Let's Work Together

Ready to discuss your next project? We offer a free 30-minute strategy consultation to understand your needs and explore how we can help.
